Your Candle Sconce comes packaged in (5) individual parts:

(1) Reflector

(1) Drywall Anchor

(1) Wire Base

(1) Mounting Screw

(1) Candle

Installation Instructions

1. Align your Sconce in the desired location. Locate the mounting tab towards the MIDDLE of the Wire Base, drill the first hole into the wall with a 3/32 inch drill bit. If you have chosen to use Drywall Anchors, mark the hole, remove the Wire Base, and enlarge hole with a 7/32" inch bit to accept the Drywall Anchor being careful to match the angle of the 3/32" hole. Gently tap the Drywall Anchor into hole with a hammer.

2. Insert Mounting Screw into the wall making sure to leave just enough space between the wall and screw for the Wire Base to slide over. Use a screwdriver to tighten the Mounting Screw into the wall as needed.

3. Carefully adjust the Sconce for plumb using a small level or your eye.

4. Slide the Candle into the Wire Base until seated (bottom of Candle should be in-line with bottom of Wire Base). Slide the Reflector into the arms of the Wire Base. The Reflector can be used in two different orientations (either to Zbounce light onto the wall or to reflect light out into the open.)

5. Light the candle and enjoy!
